DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lindsay G. McGuinness 24 August 2005.

The claims have been amended as follows:

1. Claim 1, line 8, inserted after "pre-established"-- PPP-over-Ethernet connection--.
2. Claim 1, line 9, inserted after "connection" and before comma "," -- established only between the access point and the back end device --.
3. Claim 1, line 9, deleted ", and wherein the pre-established communication connection is a PPP-over-Ethernet connection".
4. Claim 15, line 5, inserted after "device" -- using a pre-established PPPoE connection established only between the access point and the back end device, wherein the back end interface --.
5. Claim 15, line 5, deleted "that".

6. Claim 15, line 7, deleted "on a pre-established PPPoE communication connection".
7. Claim 23, line 1, inserted after "program" --stored on a computer readable medium --.
8. Claim 23, line 7, deleted "on" and inserted -- using --.
9. Claim 23, line 8, inserted after "connection" -- established only between the access point and the back end device --.
10. Claim 31, line 6, inserted after "communication connection" -- established only between the access point and the back end device --.
11. Claim 39, line 1, inserted after "program" --stored on a computer readable medium --.
12. Claim 39, line 6, inserted after "communication connection" -- established only between the access point and the back end device --.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Applicants have claimed the following uniquely distinct features in the instant invention, which are not found in the prior art, either singularly or in combination:

1. Regarding claim 1 – A wireless communication system comprising an access point device in communication with a back end device, the access point for wirelessly communicating with a terminal equipment device and the back end device for communicating with a host device,

Art Unit: 2662

wherein the access point device and the back end device work in conjunction to implement a plurality of protocol layers of a wireless communication protocol for enabling communication between the terminal equipment device and the host device, and wherein the access point device is operably coupled to forward upper protocol layer information from the wireless protocol message to the back end device over a pre-established PPP-over-Ethernet connection communication connection established only between the access point and the back end device.

2. Regarding claim 15 – An access point device for use in a wireless communication system, the access point device comprising: a wireless interface implementing a lower protocol layer of a wireless communication protocol for exchanging wireless communication messages with a terminal equipment device, a back end interface for communicating with a back end device using a pre-established PPPoE connection established only between the access point and the back end device, wherein the back end interface implements upper protocol layers of the wireless communication protocol, and forwarding logic operably coupled to receive upper protocol layer information over one of said wireless interface and said back end interface and forward the upper protocol layer information over the other of said wireless interface and said back end interface.

3. Regarding claim 23 - A computer program stored on a computer readable medium for operating an access point device in a wireless communication system, the computer program comprising: wireless interface logic implementing a lower protocol layer of a wireless communication protocol for exchanging wireless communication messages with a terminal equipment device over a wireless interface, back end interface logic for communicating with a back end device that implements upper protocol layers of the wireless communication protocol

using a pre-established PPPoE communication connection established only between the access point and the back end device, and forwarding logic programmed to receive upper protocol layer information using one of said wireless interface logic and said back end interface logic and forward the upper protocol layer information using the other of said wireless interface logic and said back end interface logic.

4. Regarding claim 31 - A back end device for use in a wireless communication system/the back end device comprising: upper protocol layer logic implementing upper protocol layers of a wireless communication protocol, and an access point interface for exchanging upper protocol layer information with an access point device on a pre-established PPPoE communication connection established only between the access point and the back end device, wherein the access point receives wireless communications from a terminal equipment device and implements a lower protocol layer of the wireless communication protocol.

5. Regarding claim 39 - A computer program stored on a computer readable medium for operating a back end device in a wireless communication system, the computer program comprising: upper protocol layer logic implementing upper protocol layers of a wireless communication protocol, and access point interface logic for exchanging upper protocol layer information with an access point device on a pre-established PPPoE communication connection established only between the access point device and the back end device, wherein the access point device receives wireless communications from a terminal equipment device and implements a lower protocol layer of the wireless communication protocol over an access point interface.

Art Unit: 2662

The closest prior art, either singularly or in combination, fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Allowable Subject Matter

Claims 1-46 are allowable over the prior art of record.

Conclusion

Claims 1-46 being allowable, **Prosecution On The Merits Is Closed** in this application.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
